Aaron, Will, Eric

Future Features:

Notifications could be extended to DMs, as well as new questions.

Another feature nice to have would be light and dark themes for Snippets.

Another potentially useful enhancement for Snippets would be adding the ability to have multiple files within a Snippet.

Tech Stack/Design:

Stack Solve retains much of the original structure of FSO. We use a layered architecture, separating client side logic from backend data using a REST api.

We utilized WebSockets to enable real time updates for features like Badges and Notifications, and made enhancements to the API for Snippets.

Stack Solve builds off of Fake Stack Overflow, enhancing it with features to emphasize the social nature of the site, creating a space where communities of developers can thrive. To this end, we have added a Notifications system, embedded code Snippets to answers, and a variety of quality of life improvements.
