

# CS 4530: Fundamentals of Software Engineering

## Module 1.1 Course Introduction

---

Adeel Bhutta

Khoury College of Computer Sciences

# Learning Objectives for this Lesson

---

- By the end of this lesson, you should be able to:
  - Explain in general terms what software engineering is
  - List your weekly obligations as a student
  - List the requirements for completing the course

# Origins of "software engineering"

Margaret Hamilton  
@ NASA, around 1963

The Apollo  
Guidance  
Computer's  
software,  
basically

1968 NATO conference on Software  
Engineering + Outcomes

SOFTWARE ENGINEERING

Report on a conference sponsored by the  
NATO SCIENCE COMMITTEE  
Garmisch, Germany, 7th to 11th October 1968

Chairman: Professor Dr. F. L. Bauer  
Co-chairmen: Professor L. Bolliet, Dr. H. J. Helms

Editors: Peter Naur and Brian Randell

January 1969

Friedrich Bauer

Anthony Oettinger, ACM President

*Comm. of  
the ACM,  
August 1966  
(page 546)*

ing nature. We must recognize ourselves—not necessarily all of us, and not necessarily any one of us all the time—as members of an *engineering* profession, be it hardware engineering or software engineering, a profession without artificial and irrelevant boundaries like that between “scientific” and “business” applications.

Barry Boehm

*(all pictures from Wikipedia)*

# Goal: to make software an engineering discipline

---

Software engineering concerns the

- design
- construction,
- and maintenance
- of large programs
- over time.

# Okay, what do you mean by "large"

The Apollo Guidance Computer's software

Almost any pre-series-B startup

Your 4-person project in this class

(image from "The Scale of Space" on KWIT, March 2018)

# Problem #1: Programs need to be read by people

---

“Any fool can write code that a computer can understand. Good programmers write code that humans can understand”

- Martin Fowler

# Problem #2: People need to talk to each other

---

“Adding manpower to a late software project makes it later”

Fred Brooks, 1975

# So, software engineering must encompass:

---

**PEOPLE,**

**PROCESSES,**

**& PROGRAMS**

# The course will cover

---

- People
  - how to organize software teams and make them function effectively
  - how software engineering teams work in larger organizations
- Processes
  - how to divide a large project into engineering tasks
  - how to coordinate the tasks to form a coherent whole
- Programs
  - how to write programs that people can understand and maintain
  - ...focusing on a particular domain (medium-sized web applications)

# Think of {your software's} design at three scales

---

## The Planning Scale

- key questions: How do we make software artifacts “good”? What does that mean? Who decides?

## The Organizational Scale

- key questions: What are people’s needs? How do we design software artifacts that meets those needs?

## The Implementation Scale

- key question: how to design software artifacts that are easy to test, understand, and modify?

# So, software engineering must encompass:

---

PLANNING,

ORGANIZING,

& IMPLEMENTING

# So, software engineering must encompass:

PEOPLE

PROCESSES

PROGRAMS

PLANNING

*mostly out of scope*

ORGANIZING

*This class is here-ish*

IMPLEMENTING

*previous classes (OOD)*

# Learning Objectives for this course:

---

- By the end of this course, you will...
  - ...be able to define and describe the phases of the software engineering lifecycle.
  - ...be able to explain the role of key processes and technologies in modern software development.
  - ...demonstrate the ability to **use** these key processes
  - ...demonstrate the application of key technologies and major tools used in elementary software engineering tasks.
  - ...design and implement a portfolio-worthy software engineering project in a small team environment that can be showcased to recruiters.

These are normal learning goals for a course at a university!

This is maybe a little different

# The course will be delivered through:

---

- Lectures and in-class discussion
  - In person
  - Slides will be available on course website
- Activities
  - these will give you practice with the technologies we will use
  - we will often start these during class, sometimes in groups
  - these will be **graded**.
  - **Attendance** is required
- Tutorials
  - these will give you background on key processes and technologies {we will use} at a greater level of detail than we can cover in class
  - Primary “reading” for the course in lieu of a textbook

# Course Mechanics: Lectures and Attendance

---

- Classes will include both lectures and activities.
- Be sure to bring your laptop
- Attendance is required, especially when working on activities and project stuff (i.e., “work on project” sessions, project meetings, and demos)
  - For excused absence, you will need to contact the instructor by email.

# Course Deliverables

---

- First, an individual project, which we will assign. This is to be done **individually**.
  - divided into 3 deliverable projects
  - this counts for 30% of course grade
- Then a **group** project, done in teams of *about* 4 people
  - this counts for 40% of course grade
- There will be an exam (worth 20%) on June 8 during **Week 6**. There will not be a final exam. Check Calendar
- Participation / Completion of activities (10%)

# Course Requirements

---

To pass, you must also:

- Do most of the individual projects\*
  - Demonstrate understanding of concepts in midterm
  - Demonstrate ability to do software development & engineering in group project
  - Present your final project
- 
- If you don't complete individual projects, you might not be assigned to a project team

# Technology

---

- We will use:
  - TypeScript as implementation language
  - Vitest as Testing Framework
  - Visual Studio Code as our IDE
  - React for webapps
  - GitHub Projects for Project Management
  - GitHub Actions / Render for CI/CD
  - Also, other miscellaneous tools

# Welcome to the Game Nite team!

- We want to be the #1 spot for people who want the social experience of watching Twitch™ but for turn-based games
- CS 4530 is part traditional academic course, part “having a new software job” simulation
- The individual projects are like “onboarding” projects, and the group project is a scaled-down version of actual product delivery
- Course staff have a secondary role as part of this simulation

## Number Guesser

Game room created 7 hours ago

Player #1 is Yāo

Player #2 is The Knight Of Games

Player #3 is Frau Drei

you are player #4

In the guessing game, players guess a number between 1 and 100. The closest wins!

- Yāo guessed 16
- The Knight Of Games guessed 2
- Frau Drei guessed 99
- You guessed 59 🏆

Game over! The secret was 43

# Welcome to the Game Nite team!

---

- The individual projects will help you become familiar with the codebase (worth 30% of course grade).
- The team project (worth 40%) will be a new feature that you will propose.
  - Instructors will form the teams **with** your input.
- Further breakdown of team project grade is:
  - Planning (worth 8% of course grade)
  - Process (worth 8%)
  - Product (worth 16%)
  - Reports (worth 8%)
- Peer evaluations (surveys) may be utilized, and individual contributions **WILL** impact your project grade (between 0-100%).

# Grade Appeal Policy

---

- If you have concerns regarding the grading of your work, please let us know right away.
  - We provide mechanism for you to request regrades for all work submitted (usually Gradescope appeals)
  - Do **not** post on Piazza or email your TA or instructor
  - All regrade requests must be submitted within **5 days** from your receipt of the graded work.
  - If your regrade request is closed and you feel that the response was not satisfactory, you may appeal to the instructor via email within 48 hours

# Late Policy

---

- Individual projects & activities are **late** if it is not turned in by the deadline.
  - 10% will be deducted for late individual work turned in within 24 hours after the due date
  - Individual work submitted more than 24 hours late will receive a zero.
  - If you're worried about being busy around the time of a HW submission, please plan ahead and get started early.
  - If you have an accommodation from Disability Access Services (previously DRC), you must request it from the instructors separately for each assignment or exam.
- No late submissions allowed for any **group project** submissions
  - DAS Accommodations are usually NOT available for Group Assignments (please work with instructor, we'll make something work!)

# Academic Integrity (1)

---

- Students must work individually on all homework assignments.
- We encourage you to have high-level discussions with other students in the class about the assignments, however, we require that when you turn in an assignment, it is only your work. Copying any part of another student's assignment is strictly prohibited.
- Small snippets of publicly posted code are allowed **with attribution**
- If you steal someone else's work, you **fail** the class.
- You are responsible for protecting your work. If someone uses your work, with or without your permission, you **fail** the class.

# Academic Integrity (2)

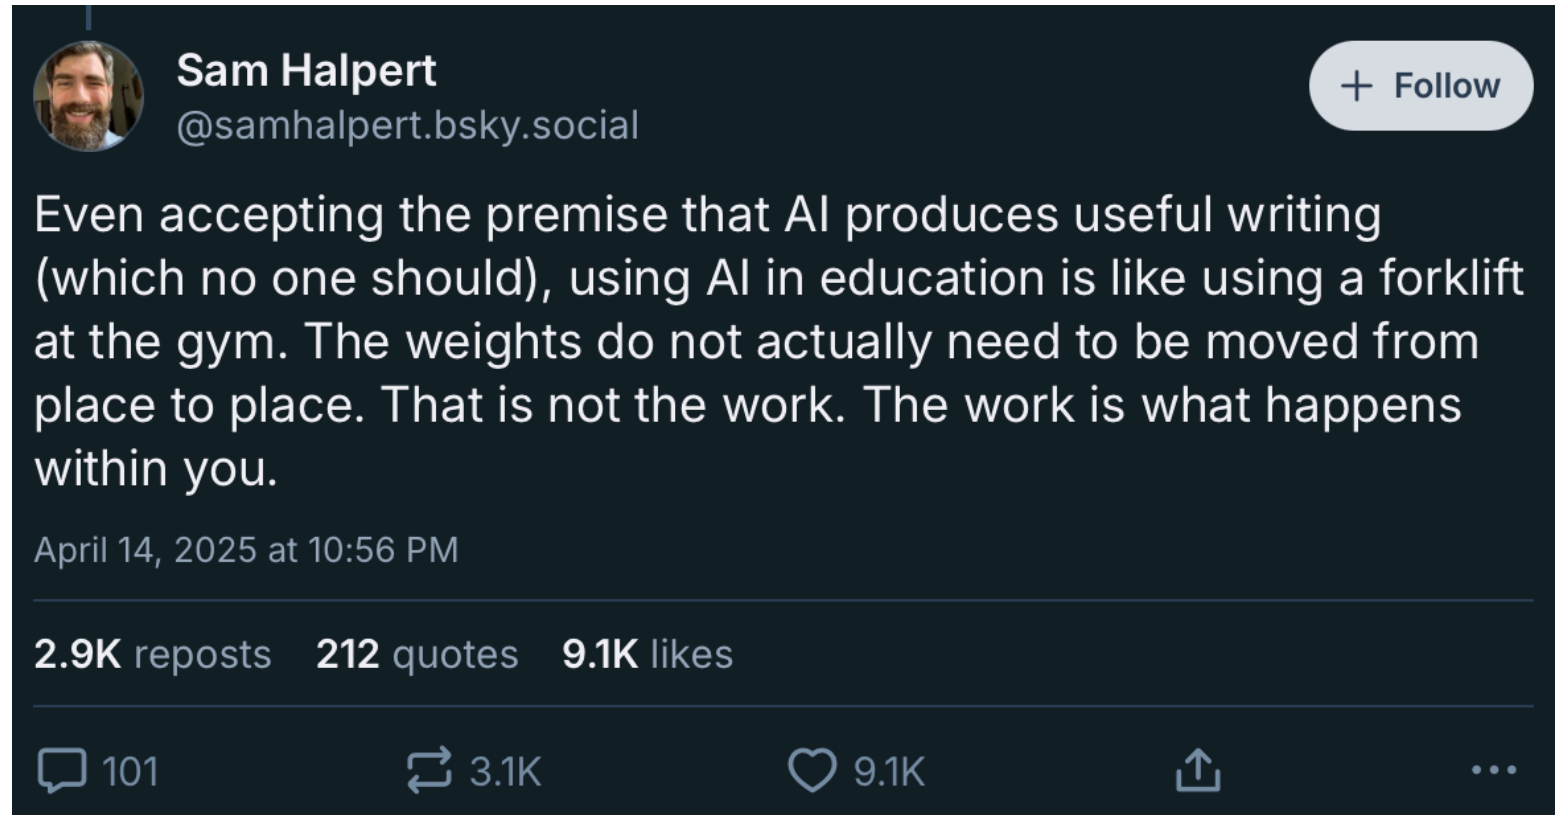

---

- If you are concerned that by reusing and attributing that copied code it may appear that you didn't complete the assignment yourself, then please raise a discussion with the instructor.
- If you are in doubt whether using others' work is allowed, you should assume that it is NOT allowed unless the instructors confirm otherwise.

# Academic Integrity & LLM-based Tools

IP1 & IP2 are designed for you to do **without LLM-based tools.**

- No Copilot fancy auto-complete
- No natural language to code tools
- No chatbot-assisted code understanding

A screenshot of a social media post on a dark background. At the top left is a circular profile picture of a man with a beard. To its right is the name 'Sam Halpert' and the handle '@samhalpert.bsky.social'. In the top right corner is a '+ Follow' button. The main text of the post reads: 'Even accepting the premise that AI produces useful writing (which no one should), using AI in education is like using a forklift at the gym. The weights do not actually need to be moved from place to place. That is not the work. The work is what happens within you.' Below the text is the timestamp 'April 14, 2025 at 10:56 PM'. Underneath are engagement metrics: '2.9K reposts', '212 quotes', and '9.1K likes'. At the bottom are icons for replies (101), reposts (3.1K), likes (9.1K), a share icon, and a three-dot menu icon.

Sam Halpert  
@samhalpert.bsky.social

+ Follow

Even accepting the premise that AI produces useful writing (which no one should), using AI in education is like using a forklift at the gym. The weights do not actually need to be moved from place to place. That is not the work. The work is what happens within you.

# Using LLM-based Tools in This Class (1)

IP1 & IP2 are designed for you to do **without LLM-based tools**.

- No Copilot fancy auto-complete
- No natural language to code tools
- No chatbot-assisted code understanding

Why? Because there are sophisticated TypeScript-powered tools for navigating codebases in VS Code (which don't require a subscription). We want you to **also** have experience with these tools.

# Using LLM-based Tools in This Class (2)

---

- For IP3, exploration of generative tools is **gently encouraged**
- For final projects
  - Use of AI tools is **permitted** — create a group policy on AI
- **You are responsible for your code and must understand it**
  - **You must document uses of LLM-based tools**
- We reserve the right to **interview** you to gauge your understanding (with possible grade adjustments)

# No LLM Tools For Writing

---

- When we ask you to write English text, it's because we want you to write it and because we're going to read it.
- You're just disrespecting yourself and us by having us read LLM-generated text.

# Communication

---

- Course web page (<https://neu-se.github.io/CS4530-Summer-2026/>)
  - **Canvas** will mirror the course web site.
  - Assignments, important notices, etc., will appear in both places.
- Piazza (see Canvas for link)
  - Questions about content, policies, assignments, projects, etc. are better asked on Piazza, so everybody gets the same answers.
- Contacting the Instructor
  - For private questions about your individual situation, please email the instructor directly (do NOT use Canvas messages – sometimes they do not get through to the instructors)
  - **Please put CS4530 in the subject line** so your message does not get overlooked
  - We encourage all students to “meet” with the instructor at least once!
- Office Hours
  - Schedule is available at (<https://neu-se.github.io/CS4530-Summer-2026/staff/>)
  - TA Office Hours are held via **Khoury Office Hours App**

# Review

---

- Now that you've studied this lesson, you should be able to:
  - Explain in general terms what software engineering is
  - List your weekly obligations as a student
  - List the requirements for completing the course
